

One million seconds is roughly equal to 11.5 days.

One billion seconds is roughly equal to 31.75 years.

In 2017, there were 8.4 billion IoT devices.

By 2020, that number exceeded 20.4 billion devices.

Every second, another 127 devices are connected to the internet

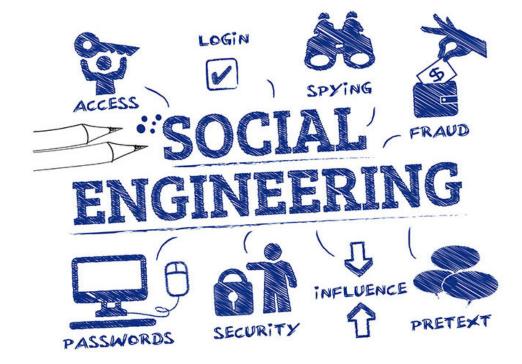

What is Social Engineering?

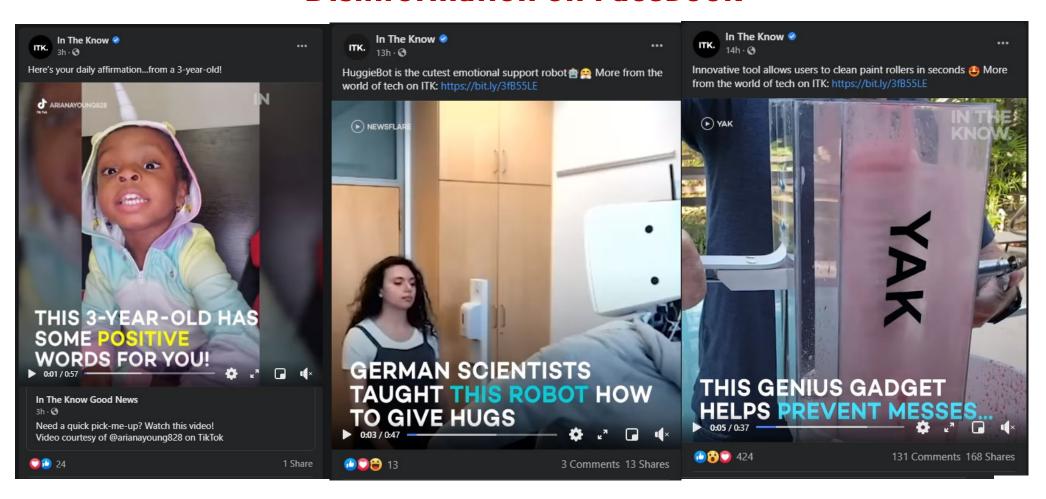

so·cial en·gi·neer·ing
/'sōSHəl ˌenjəˈni(ə)riNG/

noun

the use of deception to manipulate individuals into divulging confidential or personal information that may be used for fraudulent purposes.

What is Cybersecurity?

cy·ber·se·cur·i·ty

/ˌsībərsiˈkyoorədē/

noun

measures taken to protect a computer or computer system (as on the Internet) against unauthorized access or attack

Simply put, cybersecurity is protection against digital attacks.

The Department of Homeland Security says it best: "Our daily life, economic vitality, and national security depend on a stable, safe, and resilient cyberspace."

What's the big deal about Cybersecurity?

Georgia State Patrol

July, 2019 - State officials say Georgia is recovering more rapidly than expected from a ransomware attack on the Georgia State Patrol (GSP) computer system.

The hack cost the GSP much of its ability to quickly communicate with troopers in the field and put a cyber scare into much of the rest of state government, but its reach isn't as far as officials first feared.

What's the big deal about Cybersecurity?

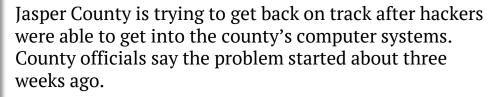

Local Impact

Jasper County Incident - Oct 2019

Headline: "County computers attacked by ransomware in Jasper County"

Details on the origin of the ransomware and who put it into the system are still being investigated. Since it was found, the county has spent thousands of dollars trying to combat the issue, according to County Council Chairman Tom Johnson.

The systems are reportedly back up and running at this point, but Jasper County Sheriff Chris Malphrus is asking people to be patient when paying county taxes or bills until everything returns to normal. The sheriff also said his office will be working hard to catch up on entering data back into the system from the last few weeks.

DEPARTMENT OF THE TREASURY WASHINGTON, D.C. 20220

Advisory on Potential Sanctions Risks for Facilitating Ransomware Payments1

Date: October 1, 2020

The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is issuing this advisory to highlight the sanctions risks associated with ransomware payments related to malicious cyber-enabled activities. Demand for ransomware payments has increased during the COVID-19 pandemic as cyber actors target online systems that U.S. persons rely on to continue conducting business. Companies that facilitate ransomware payments to cyber actors on behalf of victims, including financial institutions, cyber insurance firms, and companies involved in digital forensics and incident response, not only encourage future ransomware payment demands but also may risk violating OFAC regulations. This advisory describes these sanctions risks and provides information for contacting relevant U.S. government agencies, including OFAC, if there is a reason to believe the cyber actor demanding ransomware payment may be sanctioned or otherwise have a sanctions nexus.²

Leaked Credentials

The Verizon 2021 Data Breach Investigations
 Report found that 61 percent of data breaches are caused by leaked credentials.

Credentials are highly sought out by hackers!

 The largest password leak in history occurred in June 2021; a collection of 8.4 billion passwords make up the stolen credential forum, further proving the value of stolen credentials, whether personal or professional.

Cyber Crime by the Numbers

Let's put it in perspective:

- Tesla, Facebook, Microsoft, Apple, Amazon, and Walmart combined annual revenue totals "just"
 \$1.28 trillion. Cyber crime earns \$1.5 trillion annually.
- The \$1.5 trillion that cybercriminals earn is equal to Russia's gross domestic product (GDP)
- If cybercrime were a country, it would have the 13th highest GDP in the world.

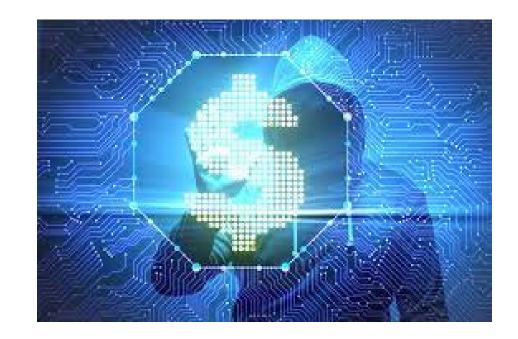

https://www.darkreading.com/vulnerabilities---threats/cybercrime-may-be-the-worlds-third-largest-economy-by-2021/a/d-id/1337475 https://www.darkreading.com/cloud/cybercrime-is-skyrocketing-as-the-world-goes-digital/a/d-id/1331905

Cyber Crime by the Numbers

Let's put it in perspective:

- It's estimated that cybercrime will cost the world \$10.5
 trillion annually by 2025.
- Organized criminal gangs account for **55%** of attacks
- According to the FBI's IC3's 2021 Internet Crimes Report, there were 847,376 complaints of suspected internet crimes in the US, an increase of 7% from 2020.
- Those reported losses exceeded **\$6.9 billion**, an increase of 41% from 2020.

Internet Crimes Complaint Center (IC3.gov)

https://www.ic3.gov/Media/PDF/AnnualReport/2021_IC3Report.pdf

How can we help?

- 1. Call law enforcement. Report it. Report it to IC3!
- 2. Be positive advocates for change and security!
- 3. Ensure you have backups and test your restoration process.
- 4. Patch. Patch. Its not a fun process but its critical.
- 6. Change how you train employees. Conduct IN PERSON training as well as online. Everyone needs training!
- 7. Insist on multi-factor authentication for external access (email, OneDrive, VPN) to business apps and for important, personal apps for yourself (email, banking)
- 8. Does your organization have a cyber incident response plan? Have you ever tested it?

How can we help?

- 9. Trust but verify. Have a third party come in for an audit.
- 10. Don't try bypass security features and don't let others.
- 11. Talk about cyber attacks in your social settings, at work, in the classroom, and at home.

Try to get others to understand the impact of the attack. Make it relatable to how it would impact their lives. We can no longer shrug it off.
